# Features

Cornices and valances easily lend an impressive touch to windows and doors. Used on their own or over window treatments, cornices and valances are as decorative as they are functional.

Palladian window shelves create a mounting surface for unique or difficult installations.

- Unique styles of wood cornices, wood valances, and faux wood valances provide the perfect solution for any décor
- Wood cornices and valances are crafted from premium North American hardwood and are available in all paints and stains to coordinate with Graber® Wood Blinds, as well as unfinished
- Dress up a drab window
- Enlarge a window
- Keystones are included with a spliced cornice or wood valance
- Additional keystones are available as a surcharge option for cornices or wood valances that do not require splices

Wood used to manufacture Graber Wood Blinds has many natural characteristics which make it truly unique...no two pieces of hardwood are alike. The following are all natural characteristics of wood and we do not consider them to be defects:

- Grain—The direction, size, and appearance of wood fibers vary greatly depending on where the wood is cut from within the tree
- Tiger Striping—Occurs when a tree develops wavy grain, due to genetics, soil content, or other natural scenarios
- Burl Grain—Formed from an irregular growth on the outer edge of the tree
- Bird's Eye—Small area on the surface of the board where fibers are contorted to form circular figures that resemble birds' eyes
- Pin Knots—Vary in size, shape, structure, and color
- Mineral Marks—Dark or discolored area caused by minerals which the tree extracts from the water or soil; can be either a streak or a stain, usually blackish blue
- Knotty Pine/Rustic—Material contains markings that are more extreme than in standard products; the number and degree of marking will vary throughout the blind

Please be assured that these markings in no way affect the durability or the structural integrity of the blind.

Natural variations in color and grain effect are inherent in the beauty of wood. These variations are within established industry guidelines and should be expected. When two or more pieces of wood are spliced together to create wider valances or cornices, there may be variations in the dye lot and grain between the sections. In addition, valances and cornices may stain slightly darker or lighter than the samples shown in the sample books and selectors.

^Inside mount wood cornices that require a keystone cannot be mounted flush to the top of the window casing. There will be approximately a ¼" (0.7 cm) gap at the top and the installation brackets may be visible with this application.

†Keystones not available on authentic hardwood, barnwood, distressed wood, in sandblast finish, composite, or faux wood valances.

**NOTE:** Cornices and valances wider than the widths shown in the chart above will be manufactured in multiple sections. The sections must be assembled during installation. Customer may request specific locations for the splices as long as it does not exceed our maximum single piece size. All requests for additional cornice or wood valance splices require a keystone. The keystone surcharge applies to each additional splice.

These formulas are used to calculate BACKSIDE valance measurements by product type.

Palladian Window Shelf	7 (17.8)	96 (243.9)	2 (5.1)	4 (10.2)

**NOTE:** Inside mount application only. The finished shelf will be ordered width less ¼" (0.2 cm). The shelf is designed for end mounting; no center supports are available. End mounting brackets must be mounted to a flat vertical surface. If installation is inside an arch, the top of the palladian shelf must be mounted at or below the start of the arch curve. Shelf can be installed in a vertical application to divide a large window. Depending on the width of the window opening and the weight of the blind or shade, deflection up to ½" (1.3 cm) may occur.

## Decorative Keystones

- Decorative keystones are required on wood cornices and valances that require splicing
- The keystones will be equally spaced unless special splice locations are requested at time of order
- Keystones can be requested on wood cornices without a splice at time of order
  - Minimum width with a keystone: 12" (30.5 cm)
  - Maximum number of keystones: 3
- Keystones will be stained or painted to match the valance or cornice ordered as standard; optional different color selection available
- Keystones not available on authentic hardwood, barnwood, distressed wood, in sandblast finish, composite, or faux wood valances
- All inside mount applications will have a slight light gap at the top of the cornice or valance when installed with a keystone
- Keystones cannot be added to existing valances or symphony cornices because the keystones require splicing at the time of order

If the valance is to be used alone (no product selected), the return width must be specified at the time of the order.

## General Information

### How to Measure for Valance Returns

Window depths vary considerably depending on the age and style of the window.

**Always** measure the window depth, regardless of the type of window treatment the client is considering. Knowing the depth when the order is placed can help prevent costly errors.

Use the information in your price list for wood, composite, and faux wood to calculate the needed return width (see previous pages).

To calculate the return width, use this formula:

[standard return width] minus [client window depth] =  
special return length to order for inside mount blind

#### REMEMBER:

- Smallest return width is  $\frac{1}{2}$ " (1.3 cm) (inside measurement)
- Returns  $\frac{1}{2}$ " (1.3 cm) to 1" (2.6 cm) (inside measurement) will be glued;
- returns  $1\frac{1}{16}$ " (2.7 cm) to  $4\frac{5}{16}$ " (11.8 cm) (inside measurement) have the option of being glued
- The width of a return and the width of a valance are measured on the inside (back side) of the valance, not the outside (face) of the valance (see diagram at right)
- Standard return size for  $2\frac{3}{8}$ " (6.1 cm) blinds—  
subtract  $\frac{3}{16}$ " (0.5 cm) prior to determining special return width
- Standard return size for  $2\frac{1}{2}$ " (6.4 cm) blinds—  
subtract  $\frac{3}{8}$ " (1.0 cm) prior to determining special return width

B: Outside Measurement

## How to Measure and Order Cornices and Valances

Wood cornices and valances are optional with your custom order or as a stand-alone order.

**NOTE:** Cornices and valances with returns are measured and cut from the **INSIDE** of the miter to ensure the most accurate fit when installed over the headrail or window frame.

### Outside Mount

- Cornices and valances are supplied with returns sized to cover the end of the blinds back to the mounting surface
- Custom returns may be ordered up to 8" (20.4 cm); minimum return is ½" (1.3 cm)
- Cornices include a dust cover to conceal the top of the blind

### Inside Mount

- Cornices and valances are supplied without returns and look best when the blinds and valance or cornice can be completely recessed
- Ends of the valance and cornice are straight-cut
- Cornices do NOT have a dust cover and returns are NOT available
- Returns for inside mount valances must be specified

### Additional Ordering Information

- Please state at the time of order if the valance or cornice return measurements are for the **EXACT** size required so that no additions or deductions are made
- Cornices and valances will be shipped separately from blind
- Manufacturer recommends installing blind and valance/cornice at the same time

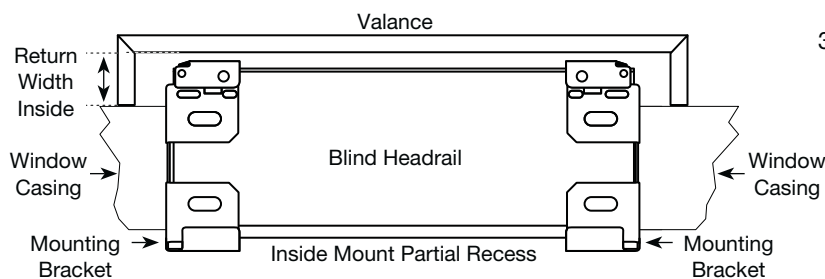

### Side View—Cornice

1. Full recess is from front of cornice to wall.
2. Return width is from miter to wall.

### Side View—Valance

1. Full recess is from front of valance to wall.
2. Return width is from miter to wall.
3. Partial recess—subtract actual window recess from return width to arrive at exact return width.

## General Information

### How to Measure a Special Splice Location

A keystone is supplied for valance and cornice widths that require a splice. Keystone will be equally spaced unless a special splice location is requested at time of order. The placement of the splice will be calculated by the factory using an INSIDE measurement from the mitered corner to the location specified on the order.

Each splice location should be recorded starting from the LEFT BACKSIDE corner.

**EXAMPLE:** Overall valance width = 80" (203.2 cm) backside measurement  
First splice from left = 30" (76.2 cm) backside measurement  
Second splice from left = 50" (127.0 cm) backside measurement

See size considerations for cornice and valance manufacturing formulas to determine exact back width size your cornice or valance will be prior to selecting splice locations.

For keystone pricing, see pricing pages.

**NOTE:** All measurements need to be from backside.

### Custom Color

Graber® offers the unique option of custom color in either paint or stain. Use the following guidelines when placing your order.

With your order, please send a color chip (at least a 2" (5.1 cm) square sample) with the color name on the sample. A sample of the color can be requested before blinds are manufactured for your approval. An approval color sample will be automatically sent on orders for six or more blinds. A customer may waive their sample if they do not wish to receive one. Samples usually add approximately two (2) weeks to the lead time of an order. If a color sample is not requested, the sample you provided will be used to manufacture the wood blinds. If the color chip is to be returned to you, please note this on your order.

Please send all color chips to:

Springs Window Fashions, LLC  
ATTN: Graber Custom Color  
33 West 3rd Street, Suite 400  
Williamsport, PA 17701

**NOTE:** Due to the nature of the custom color process, manufacturing requires an extended lead time. The standard manufacturing process does not apply. Lead-times vary depending on sizes and quantities ordered.
